Fold-Up Bike

One challenge of flying a small plane can be transportation at the airstrip. While visiting remote locations is certainly one of the perks of being a pilot, it's also nice to explore the surrounding areas and travel to nearby towns without always having to go on foot. SwissBike X90, the new high-performance mountain bike from Montague Corporation, is a rugged full-size bike that folds, without tools, to a compact 36x28x12 inches. In addition to the SwissBike X90, Montague offers complete lines of folding pavement and mountain bikes. Contact: www.montaguebikes.com.
